

# Yaseen Zuberi

(510) 648-0976 | Fremont, CA | [yaseenzuberi@gmail.com](mailto:yaseenzuberi@gmail.com)

LinkedIn: [linkedin.com/in/yaseenzuberi17](https://www.linkedin.com/in/yaseenzuberi17) | GitHub: [github.com/yaseensl](https://github.com/yaseensl) | Portfolio: [yaseensl.github.io](https://yaseensl.github.io)

## SUMMARY

---

- Proven ability to deliver production-quality features in agile environments, with expertise in authentication systems, responsive UI design, and scalable database architecture.
- Focused on the intersection of engineering and user experience, approaching projects with an eye toward how design and technical decisions shape real user behavior and product outcomes.

## TECHNICAL SKILLS

---

**Programming Languages:** C/C++, JavaScript, TypeScript, Python, Java, Dart, HTML5, CSS3

**Frameworks/Libraries:** React, Node.js, Express.js, Next.js, Flutter, NumPy, TensorFlow, Keras, Scikit-learn

**Databases:** PostgreSQL, MongoDB, Firebase Realtime Database

**Tools:** Git, Docker, Postman, Figma, Ubuntu, Studio 3T

**Core Competencies:** RESTful API Design, JWT & Firebase Authentication, Agile/Scrum, MVC Architecture, Responsive Design, Unit Testing & Debugging

## EDUCATION

---

**San Francisco State University**, San Francisco, CA

*Expected Spring 2027*

*Bachelor of Science (B.S.), Computer Science*

**Relevant Coursework:** Artificial Intelligence (AI), Human-Computer Interaction (HCI), Internet Application Design and Development, Operating Systems Principles, *Software Development, Programming Methodology, Full-Stack Web Development, Data Structures*, Programming with Data Algorithms, Object-Oriented Programming

## PROJECTS

---

**Library - Full-Stack E-Commerce Platform**

*September 2025 - December 2025*

*San Francisco State University*

[github.com/yaseensl/libraryecom](https://github.com/yaseensl/libraryecom)

- Architected a full-stack e-commerce web application with a Node.js/Express backend and vanilla JavaScript, HTML5, and CSS3 frontend, implementing session-based authentication with bcrypt password hashing and secure checkout flow.
- Designed a normalized 5-table PostgreSQL schema with foreign key constraints (CASCADE), UNIQUE and CHECK constraints, and ACID-compliant transactions to enforce data integrity across shopping cart and order operations.
- Built and documented 10+ RESTful API endpoints covering user authentication, product catalog, cart management, and order processing, following REST conventions and MVC architecture patterns.

**Pathfinder - Browser Maze Game**

*September 2025*

*San Francisco State University*

[github.com/yaseensl/pathfinder-game](https://github.com/yaseensl/pathfinder-game)

- Built a browser-based maze game in vanilla JavaScript using HTML5 Canvas, generating unique solvable mazes via a recursive backtracking algorithm.
- Implemented 5 distinct power-up types with real-time circular collision detection using distance-based calculations, and a camera viewport system for smooth player-centered rendering.
- Achieved consistent 60 FPS performance using requestAnimationFrame, optimized render loops, and responsive keyboard input handling with margin-based collision detection.

## PROFESSIONAL EXPERIENCE

---

**Software Engineering Intern**

*June 2023 - August 2023*

*Frugal Innovation Hub, Santa Clara University*

[github.com/yaseensl/order-simulator](https://github.com/yaseensl/order-simulator)

- Built 8+ reusable cross-platform UI components in Dart/Flutter for an ESL food-ordering simulation app, standardizing layout patterns and improving rendering consistency across iOS and Android.
- Integrated Firebase Authentication and Realtime Database to support secure user session management and dynamic content delivery, enabling personalized, real-time menu interactions without backend server overhead.
- Designed end-to-end wireframes and high-fidelity interactive prototypes in Figma by translating stakeholder feedback into developer-ready specs; contributed to a 2-person agile team delivering features on schedule across weekly sprints.
